

CD/DVD Face Template - Offset Printed

Offset printed discs should be designed in the CMYK color space. All spot colors used must be converted to 4-color process before file is submitted. Raster based files should be at least 300 DPI and it is recommended that they be submitted at 600 DPI. Offset disc printing is very versatile and can reproduce solids, gradients, and photos. Over-printing type should be 5pt. bold or larger. Knock-out type should be 6pt. bold or larger. It is typically used on runs of 1000 or more. All fonts should be included with art submittal. If fonts are not included, please outline vector text and/or rasterize all raster text at at least 300 DPI.
